

March 2, 2026

Dear Contractors -

We are writing to inform you of an upcoming update to our solar interconnection application process. Effective April 1, 2026, SECO Energy will transition to a new application management platform, PowerClerk, for all new solar interconnection submissions. This platform is designed to provide a more streamlined, user-friendly experience for both contractors and our internal processing teams.

To prepare for this transition, there will be a blackout period from March 20 at 4:00 p.m. through March 31. During this time, no new applications or document updates can be submitted. This temporary pause will allow our team to migrate existing eligible applications and prepare for the PowerClerk launch.

If you are working to expedite a pending installation in order to receive Permission to Operate (PTO), please ensure that all required documents, signatures, and applicable fees are submitted by 4:00 p.m. on March 20. Applications that have fully satisfied these requirements (documents submitted, fees paid, and signatures completed) will continue to be processed in the current system and will not be transferred to PowerClerk.

Please note that pending applications with no activity or document uploads within the past 30 days will not be migrated to the new system. These projects will require a new application to be submitted in PowerClerk after the April 1 launch date.

Once PowerClerk is live, you will be able to log in and submit new applications. You may also upload required documents for previously submitted applications, provided there has been activity on the application within the past 30 days.

If you have used PowerClerk with other utilities, you may log in using your existing credentials. If you are new to PowerClerk, you will need to create an account. Instructions for setting up a contractor account will be available on the platform's main landing page.

If you have questions or need additional clarification regarding this transition, please contact us at (352) 569-9955 or [solar@secoenergy.com](mailto:solar@secoenergy.com). We are committed to working with you to ensure a smooth and successful transition.

Thank you for your cooperation as we move to this improved interconnection application platform.
